

CASSETTE PANELS (FOR WIDER PANELS)

CORTEN

Year completed: 2015

Builder: Team Building

Architect: Team Building

Size: 100 m²

Custom Creations

The client wanted to use Corten Steel as the house is built from rustic, earthy elements and it was felt that this type of cladding would best complement the look.

Our challenge was to work with many angles while keeping a gap between panels both vertically and horizontally.

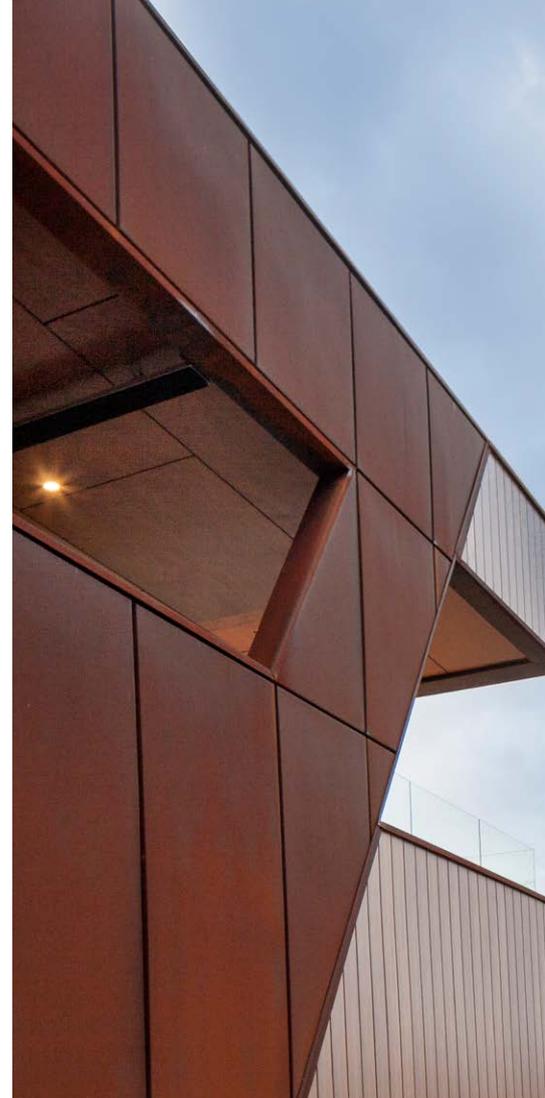

Proven profiles, precious metals

The innovative facade utilised the FPS Cassette system giving a modern, flat appearance.

Corten Steel's characteristics make it highly resistant to corrosion and weather conditions. Upon exposure to the elements, the feature cladding will form a distinctive rust-like appearance in keeping with the residence's earthy core.

Lifelong value

The striking effect of the feature cladding is timeless and the quality of the materials gives the residence an enduring exterior.
