NORMBAU ANTIBACTERIAL

The Problem	
bacterial cross-contamination via contact surfaces	4 - 5
The Solution:	
built-in, durable Microban® antibacterial protection	6 - 7
Your Benefits:	
making sure care and hygiene are all you pass on	8 - 9
Specification binder:	
Bathroom Accessories, Fittings for special needs	10 - 27
Lever sets	28 - 29
Certificates	7, 30 - 31

The Problem: bacterial cross-contamination via contact surfaces

Staphylococcus aureus (methicillin resistant)

Listeria

Contact surfaces in sanitary facilities and medical and nursing institutions are a real problem area. Staff, visitors and patients all use them equally, and both the number and successive nature of such contacts make them almost impossible to control from a hygiene perspective.

Spread throughout an institution, and touched hundreds of times a day, they constitute one of the prime causes of the spread of pathogens.

In the problematic field of nosocomial infection, these areas play as much of a central role in the transference of germs from patient to patient as does transference through direct contact.

Bacteria will settle on even the smoothest surfaces. Furthermore, the joints between materials and the transition of materials provokes further bacterial growth, which can no longer be successfully countered by the usual scrubbing and disinfection process. Dampness and warmth in sanitary facilities also play their part by allowing germ reservoirs to form, so that renewed contamination is spread each time an object is handled, and every doorway through the institution can lead to further circulation of potential illness.

Picked up by the patient ...

... passed on by everyday contact ...

... and transmitted to other patients.

Pathogens are transmitted via staff and contact surfaces in the process of opening and shutting doors, and know no limits to how far they can reach.

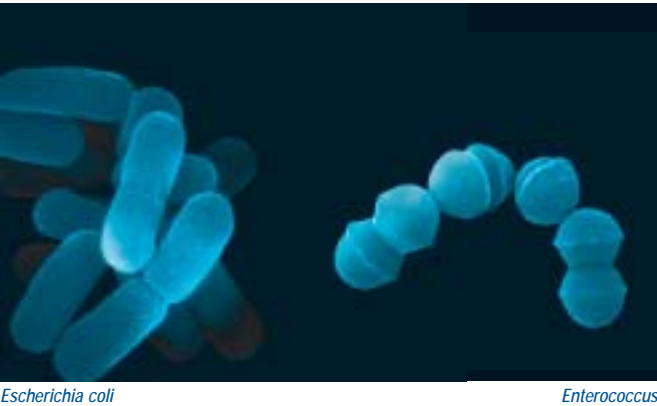

Some of the most important pathogens that are frequently found in hospitals, and play a part in the further spread of patients' infections.

All of these germs and many others are effectively controlled by Microban®, providing durable protection for new NORMBAU ANTIBACTERIAL products.

Bacteria:
Escherichia coli
Streptococcus
Staphylococcus aureus (methicillin resistant)
Staphylococcus epidermidis
Actinomyces Naeslundii
Legionella
Shigella
Salmonella
Klebsiella
Moraxella
Proteus Vulgaris
Listeria
Fungi:
Candida
Aspergillus
Blastomyces

The Solution: built-in, durable Microban® antibacterial protection

NORMBAU is the first world-wide manufacturer to offer you fittings with long-lasting effective antibacterial protection treatment:
NORMBAU ANTIBACTERIAL.

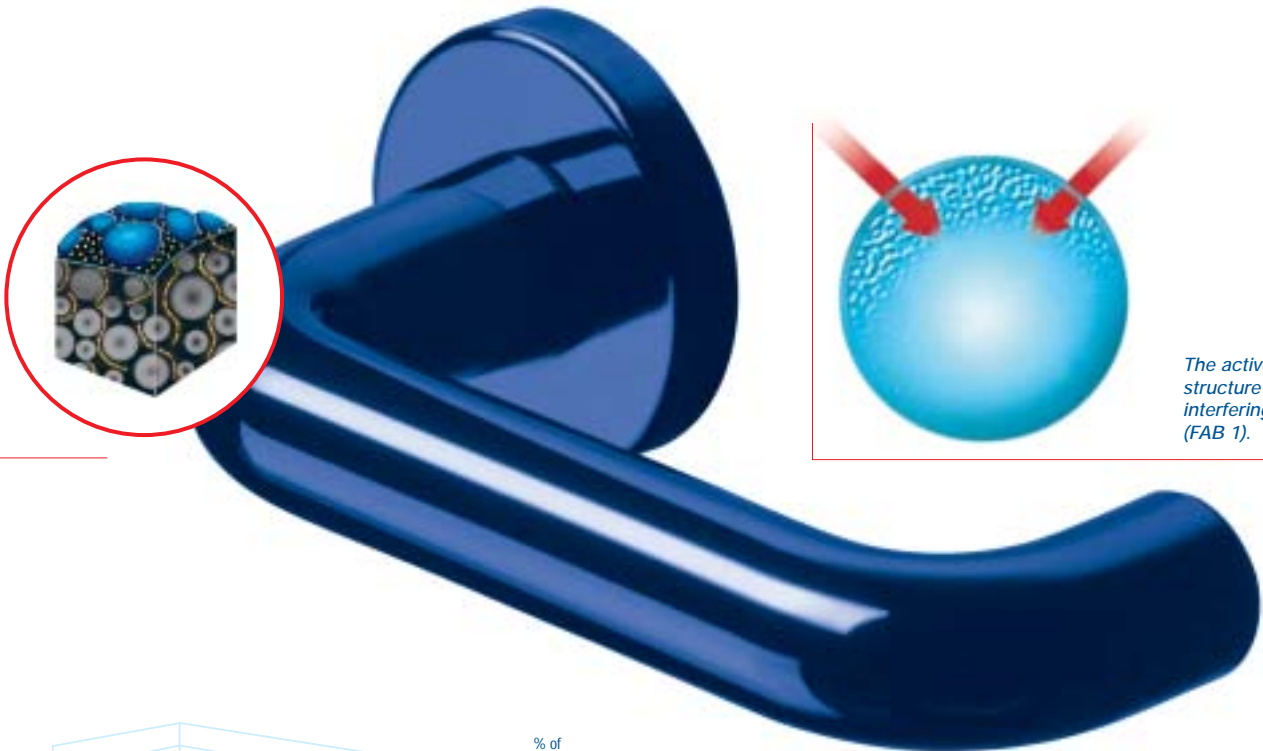

Microban® antibacterial protection is incorporated into the polymer structure of the nylon during the production process.

It cannot be washed away, nor rubbed off, and remains continually active to ensure that the antibacterial effect remains for the duration of the product's life cycle.

The homogeneous distribution of the agent throughout the product provides effective and long-lasting prevention of germ build-up, significantly reducing cross-contamination from contact areas – even in the most inaccessible places.

The vicious circle of continual germ transmission can thereby be broken in an effective manner.

Embedded in the polymer matrix of the nylon, the active agent is equally distributed throughout the upper surface area, and provides continual and reliable prevention of germ build-up.

The active agent destroys the structure of the cell membrane by interfering with a crucial enzyme (FAB 1).

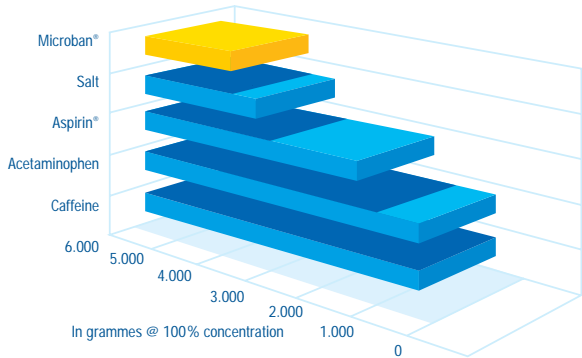

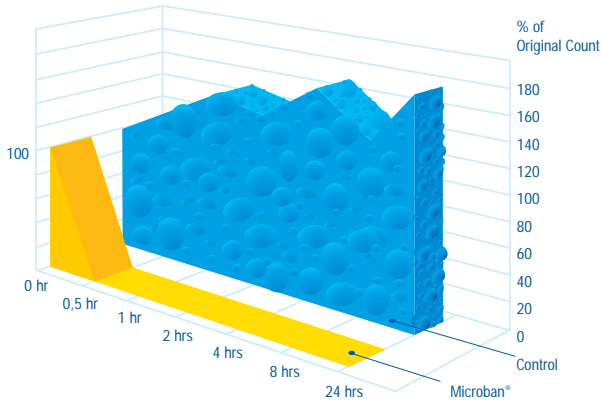

The active Microban® agent captures the relevant pathogenic hospital germs and destroys the cell membrane, thereby obstructing the function, growth and regeneration of these bacteria. This bacteria and fungus-neutralising effect takes place in a very short space of time.

NORMBAU ANTIBACTERIAL with Microban® has been tested and certified to inhibit the growth of harmful bacteria by ISEGA, an independent research and supervisory institution. We will happily provide more details of this on request.

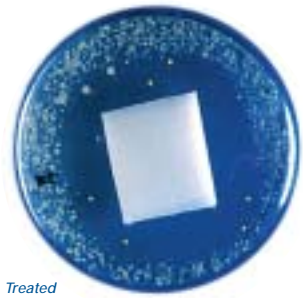

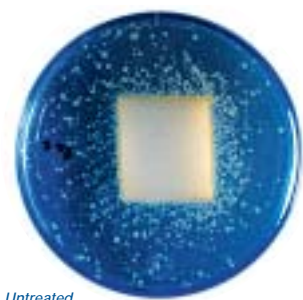

Human cells, and thus the skin, are however unaffected by the workings of this agent, because they possess a different cell structure with thick cell walls.

Reduction of a salmonella cluster over a 24 hour period on a Microban® treated surface, in patent contrast to the clear germ proliferation on an untreated surface.

Microban® is demonstrably less toxic than frequently used substances.

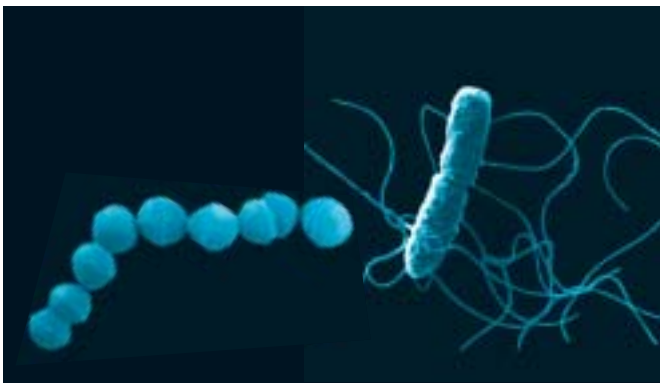

*The lower the number the more toxic the material

The plastic element that has been treated with the active agent shows a greatly reduced germ cluster when compared to a similar one that has not been treated.

Your Benefits: making sure care and hygiene are all you pass on

Streptococcus Salmonella

NORMBAU ANTIBACTERIAL range with Microban® can be applied to all the important areas of medicine, nursing and sanitary facilities.

Two types of product are available to meet your requirements: the NORMBAU NYLON LINE and the NORMBAU COMBI LINE, which is an attractive combination of high-grade steel and nylon.

With its harmonious blend of material and function NORMBAU offers you aesthetic design and exceptional stability as a result of integrated steel cores.

The holding and handle areas are fitted with a slip-resistant surface structure. The easy-to-handle nylon is comfortable to grip and warm to the touch.

With its added benefit of Microban® antibacterial protection, NORMBAU brings a new dimension to the functional and hygienic demands of healthcare.

NORMBAU ANTIBACTERIAL for washbasins, here the NYLON LINE ...

... here the NYLON LINE for toilets.

NORMBAU with lasting Microban® antibacterial protection for flexible partition system in wet environments...

The NORMBAU partition wall system allows the highest possible layout flexibility as part of an overall design identity, and represents a positive expansion of the NORMBAU ANTIBACTERIAL range.

The different elements, which are coloured throughout, permit a flexible space design and guarantee durability with the high quality production.

NORMBAU ANTIBACTERIAL as a security fitting for showers ...

... and for baths. Security and functionality with integrated germ protection.

...for slip-resistant handles

...for sanitary accessories

NORMBAU ANTIBACTERIAL comes in 5 attractive colours, and will combine happily with all known colour schemes, or fit in with whatever your colour requirements may be.

22 Yellow*

19 White

67 Manhattan

63 Bermuda

11 Blue*

...for bathroom indicator

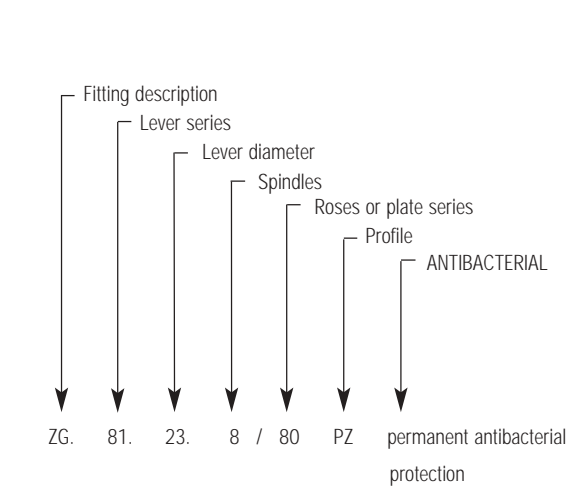

...for lever handles with rose design

(*Colours that are not available in the NORMBAU partition system.)
