

QWICKGRATE

+ SNAPSHOT

VENTILATION & ACCESS SOLUTION FOR UNDERNEATH DECK/TILE STRUCTURES

The grates are designed to integrate and align to achieve a flush surface with deck/tile/turf surface ranges. Easily removable and allow for visual inspection and access to sumps, drains and gutters under the structure. Most importantly, the QwickGrate's promotes critical airflow and ventilation under the deck structure. The solution is supplied as a kit with the concealed 'snap-mount' fastener (there are no visible screws). The snap-mount can be installed directly onto QwickBuild aluminium joists or timber joists.
