

ROBERTSONS

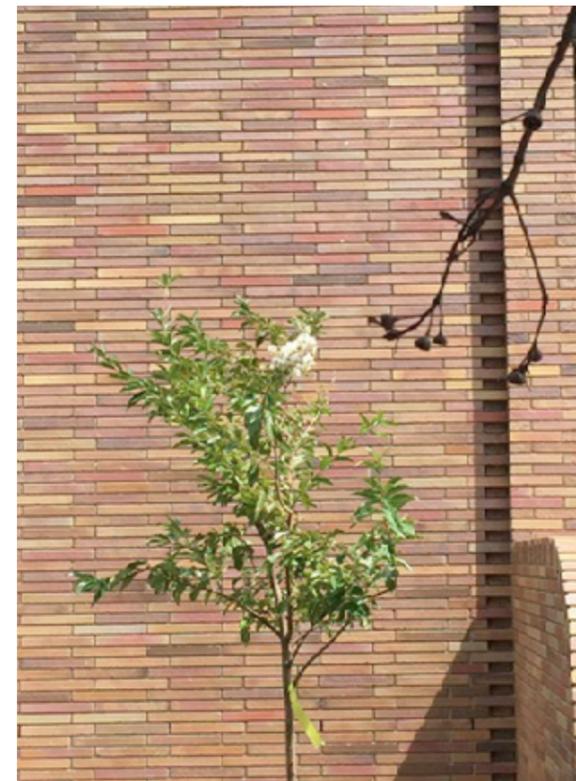

OUR BUSINESS

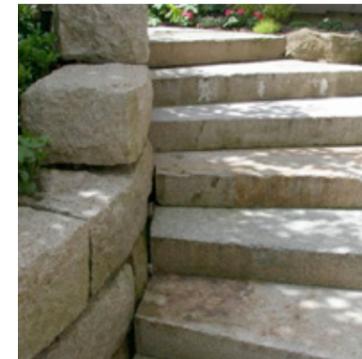

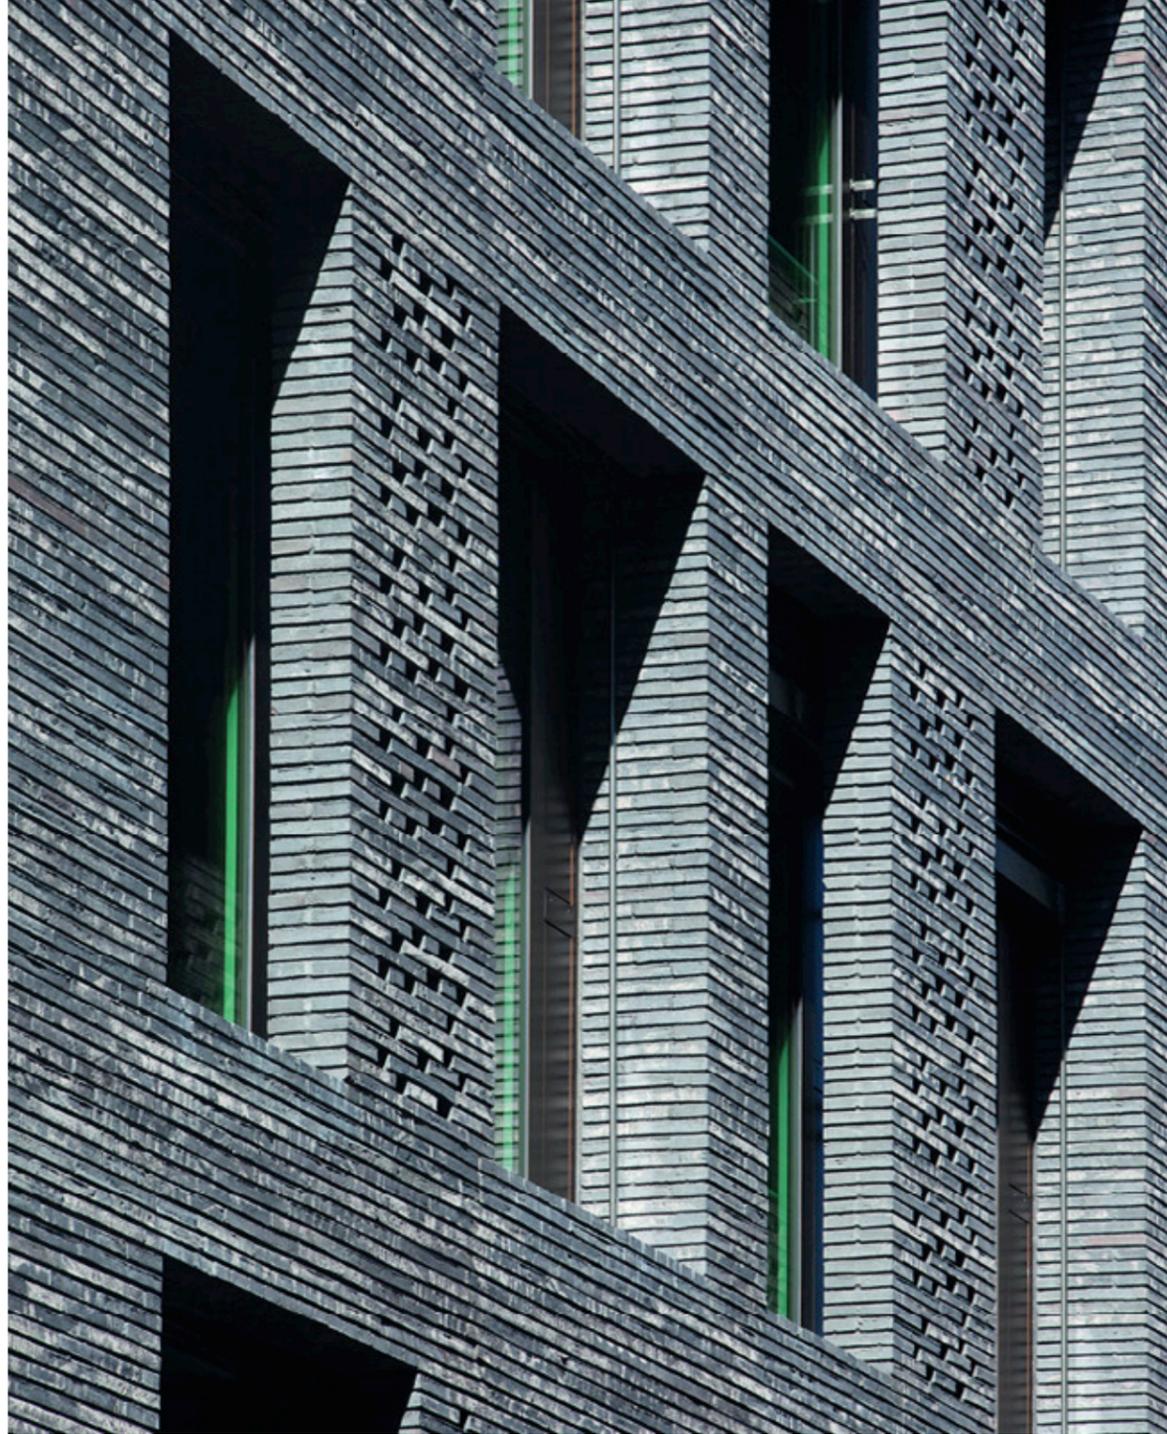

Robertsons provides innovative, customised wall and floor solutions to help architects, designers, builders and homeowners meet the challenges of the built environment.

Our founder, Peter Robertson, ran the highly-regarded Daniel Robertson brick and paving business for over 25 years. With a continuous family history in Australia of over 160 years in the Australian building products industry, Peter saw a real need for innovative building products and façade systems that deliver exceptional solutions to contemporary building design ideas.

What sets us apart is the unique nature, breadth and quality of the products and facade systems we supply, their flexibility to adapt to your project's requirements, and the personalised service and proven expertise we bring to develop the best solution for you.

And we're continuously developing existing products and sourcing new products and façade systems, both locally and internationally.

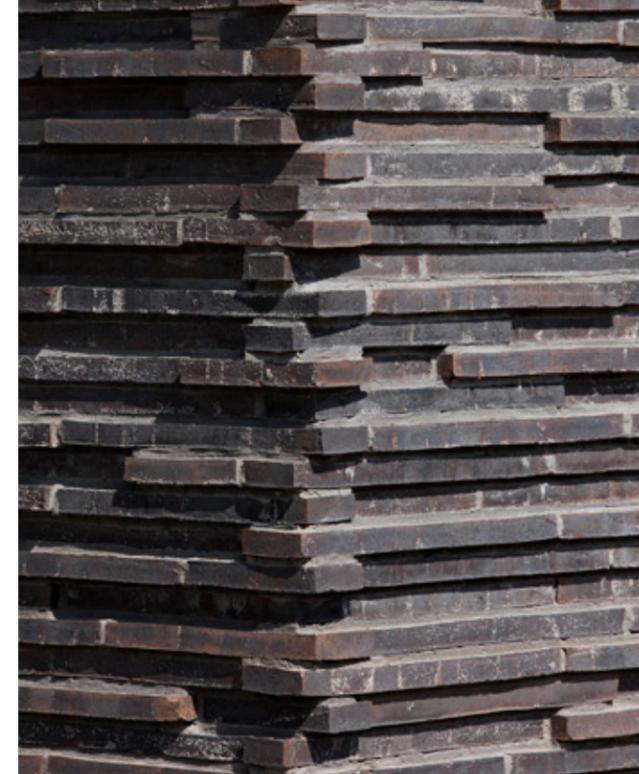

Robertson Building Products, Robertson Façade Systems, Rhodes Architectural Stone and RobCOMB supply high quality, innovative building products and systems that are a cut above. Enabling our customers' projects to turn heads and stand out from the crowd.

OUR SOLUTIONS

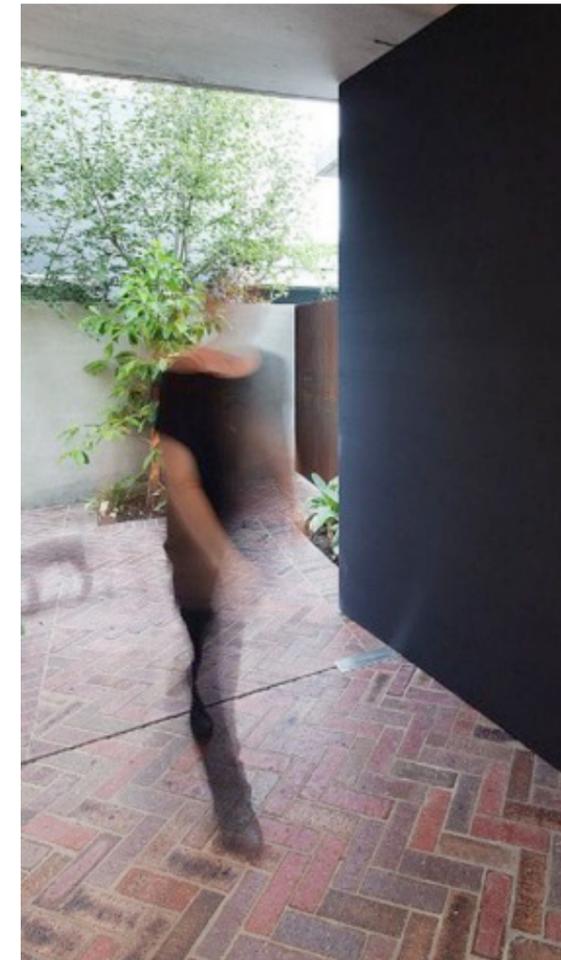

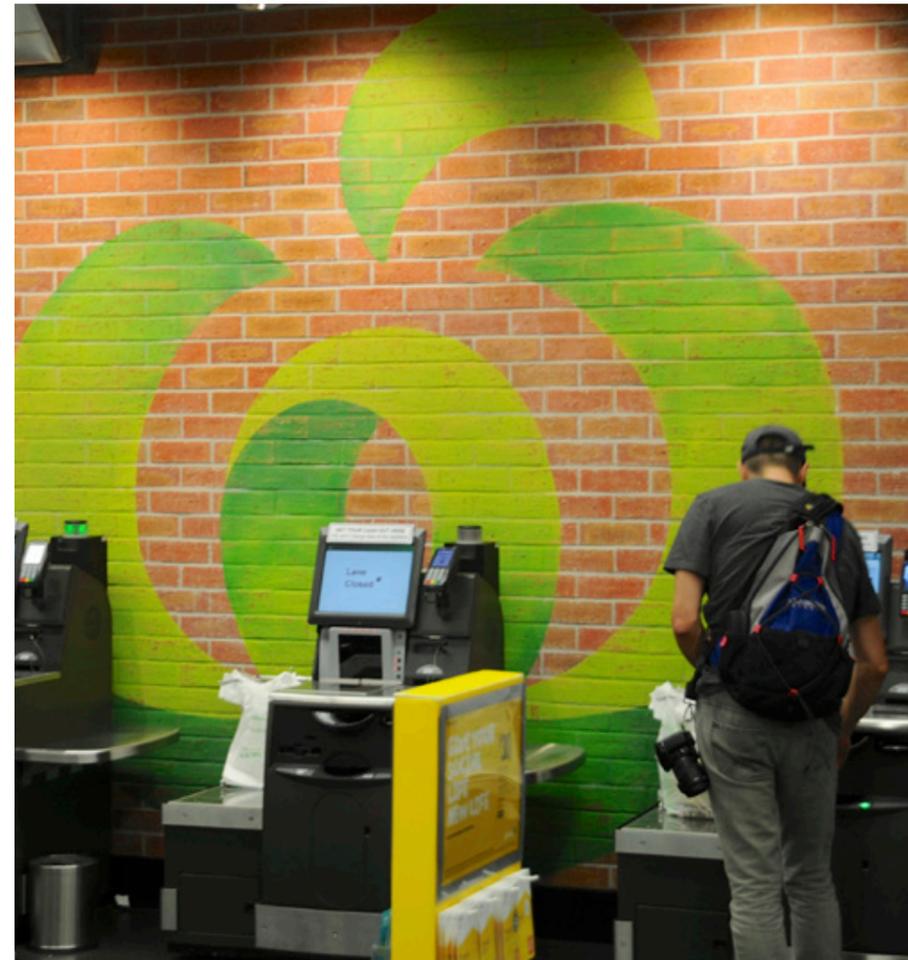

Robertsons brings together a complementary suite of building products and façade systems to support construction companies, developers, architects, contractors and engineers.

A building products innovator, Robertson's Building Products works in partnership with architects, designers, builders and homeowners, transforming their visions into practical, high quality, award-winning designs, and creating leading edge projects in their field.

ROBERTSON'S BUILDING PRODUCTS

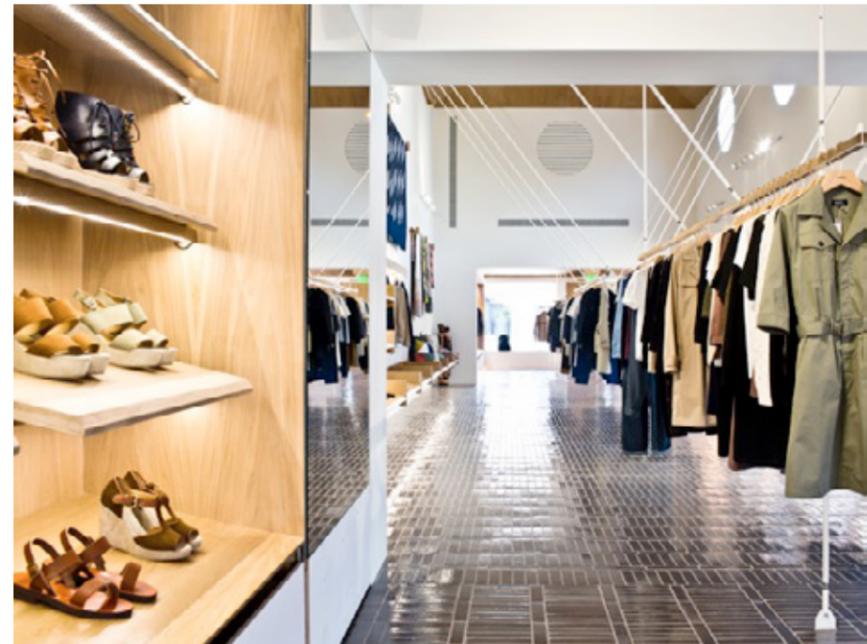

At Robertson's Building Products one size never fits all. We source and supply the best solution to meet your needs. This may be matching previously manufactured bricks, or sourcing new bricks, brick tiles, textured clay pavers, stone facing tiles, textured or glazed clay tiles, or custom made bricks.

Robertson's Building Products' thin brick tiles are a versatile option for your next building project. You can use them for internal or external walls, floors or paving and they work in perfect complement with our brick inlay system. All you have to do is choose the colour you like, and we will custom make a blend to meet your requirements.

We supply a wide range of high quality bricks, both locally and internationally sourced. What sets our bricks apart is their unique range of colours, wide variations in textures and the handmade bricks that we offer. And our product range keeps growing - we continually develop existing products and source new, unique products for your next project.

Petersen Tegl bricks

Robertson's Building Products is the sole Australian distributor for Petersen Tegl bricks. Petersen Tegl is a world renowned Danish brickworks that crafts brick in an extensive range of colours, sizes and textures. The Kolumba range was created in collaboration with Peter Zumthor. Often products are hand made for special projects, where work is carried out in close co-operation with architects or clients.

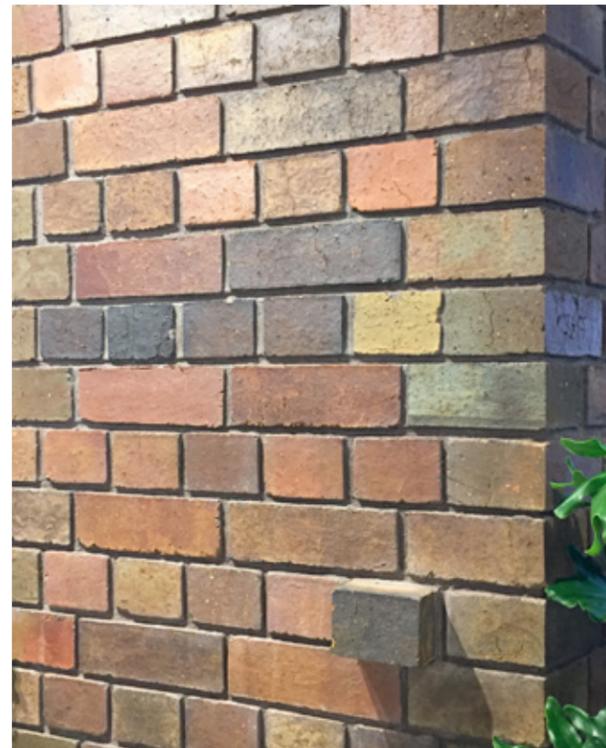

Krause bricks

Krause bricks offers a locally made product. Using traditional methods Krause Bricks manufactures a beautifully crafted range of wire-cut and pressed bricks. Colours range from vivid reds, blues and earthy warm tones to creams and light greys.

European bricks

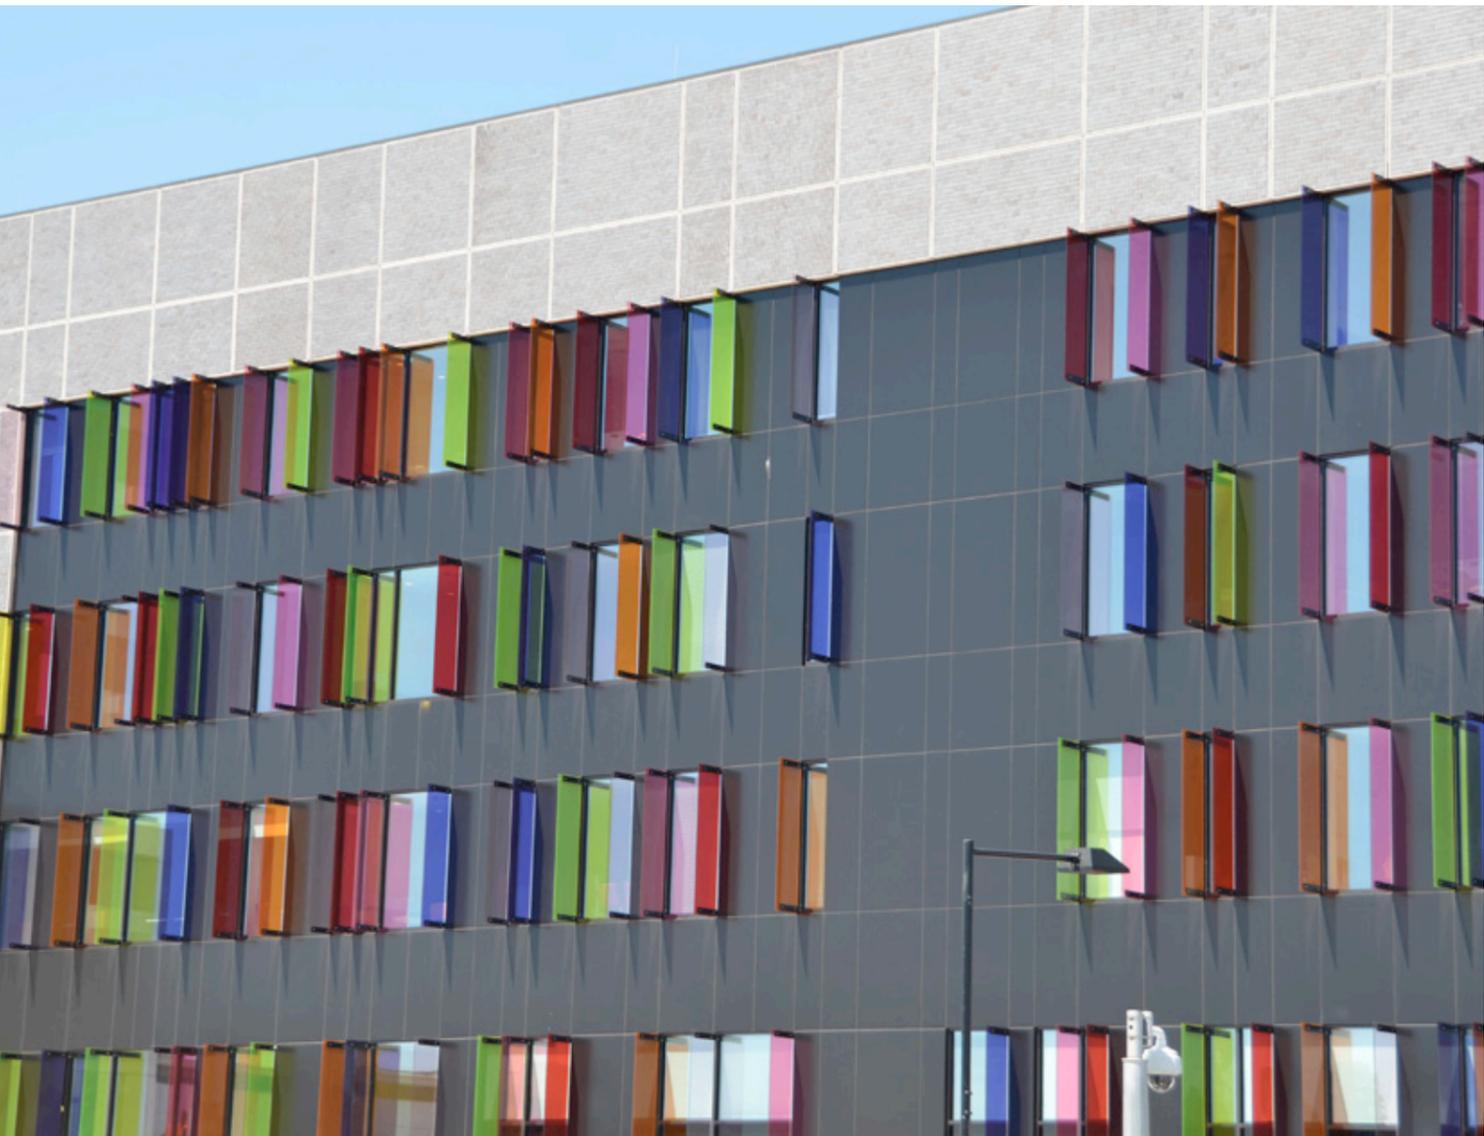

We offer a variety of European bricks including glazed bricks and a range of monochromatic colours. Their longer, lower profile provides a different aesthetic to traditional brick and many advantages. For instance, while the deep, dark hues of Regaliz and Griz are rarely achieved without glazing, the Blanco is considered the whitest brick in Europe. They are hard fired, low porosity, stain resistant brick. And the metallic glazed bricks can be supplied with a textured surface adding interest and diffusing light.

Our contemporary paving solutions range from clay brick facing tiles, to natural stone pavers and durable porcelain tiles. In fact, our newest range of porcelain stoneware is a highly versatile, high performance stoneware available in a wide range of colours, sizes, thicknesses and finishes. And the tiles are easily applied with adhesive, on sand or gravel, on pedestals or with an innovative e-deck system.

Robertson Façade Systems offers clever ways to quickly and efficiently create a decorative concrete façade with a striking, contemporary design. Whether you're after a traditional brick look, stone or a textured effect, we have the right solution for you.

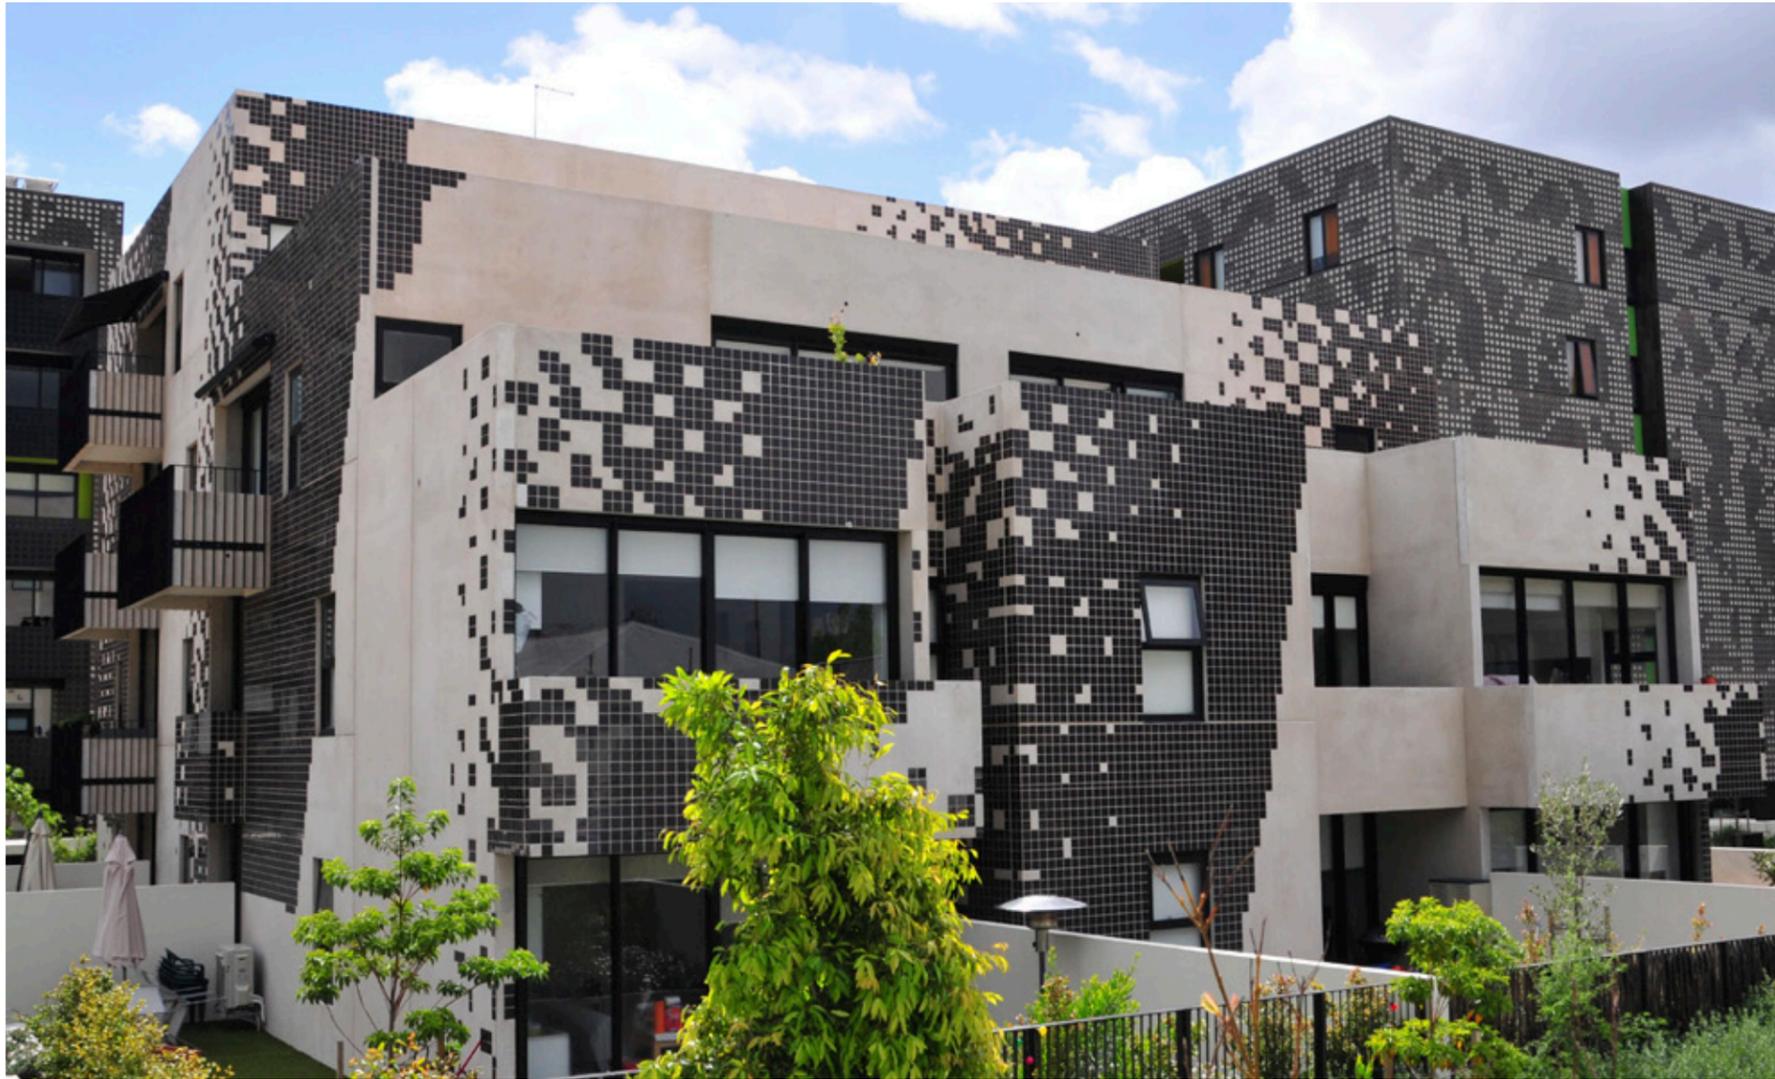

ROBERTSON FACADE SYSTEMS

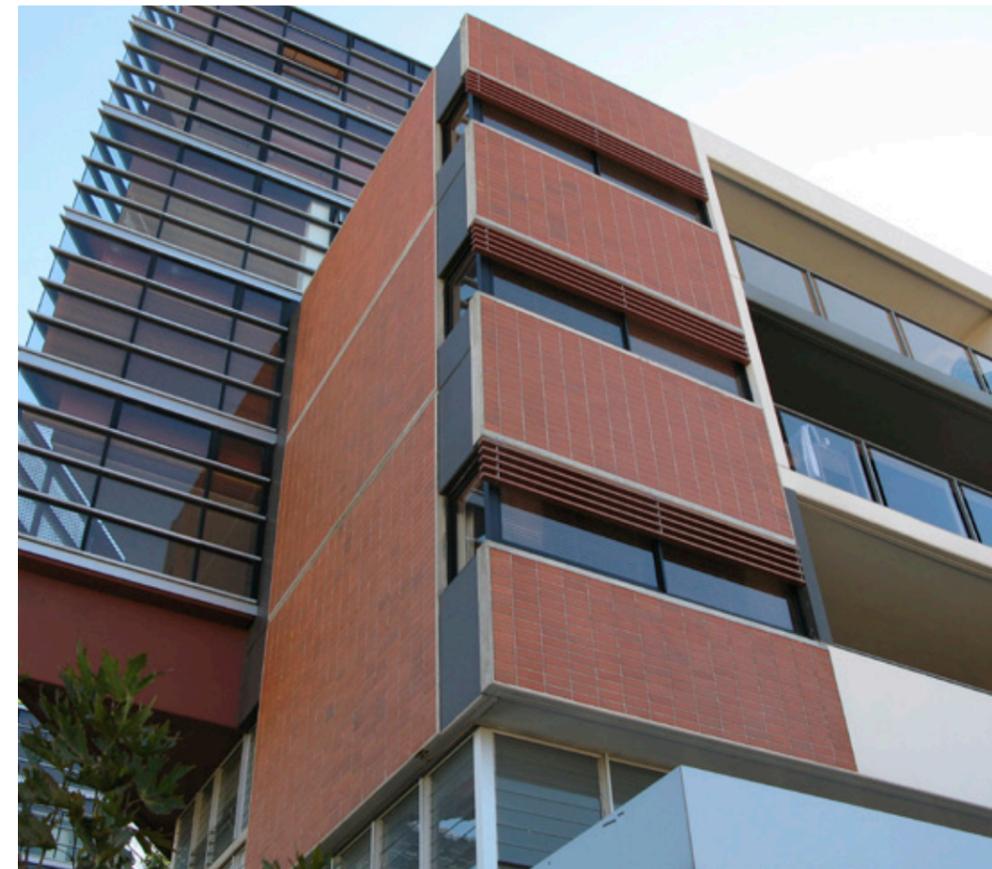

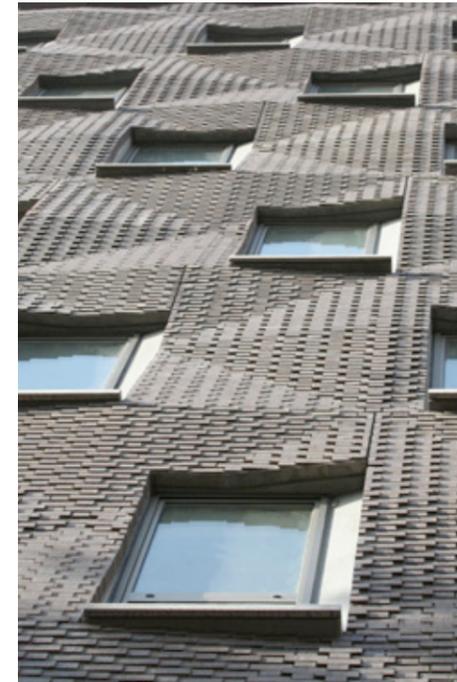

Robertson Façade Systems help you maximise design impact, minimise installation time and cost, and delivers a stand-out result that's guaranteed to turn heads.

Our façade system is the perfect complement to Robertson's Building Products' thin brick tiles, including the Rustic, Smooth Pressed, Glazed and Stone Brick Facing Tile range. This offers you a complete, innovative thin brick solution.

Our thin brick inlay system involves laying thin bricks or stone of varying sizes into precast concrete to quickly achieve the look and feel of a traditional brick, stone or texturised wall. Plus you enjoy all the efficiencies of precast concrete – reduced cost and installation time, easier site management and an innovative, contemporary wall solution.

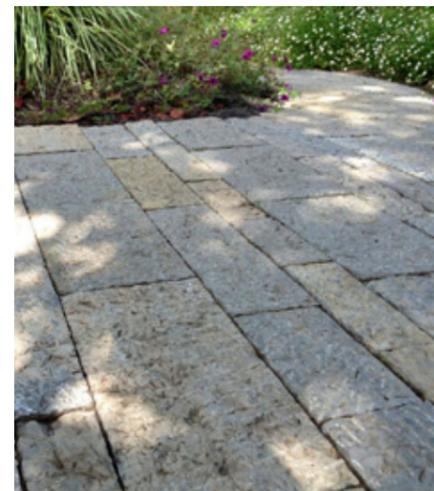

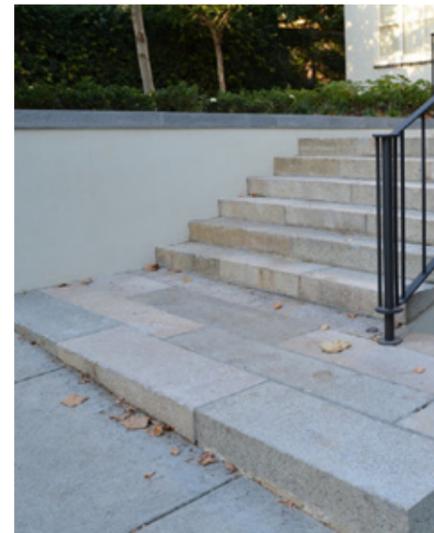

Rhodes Architectural Stone offers high quality, natural stone, handcrafted to your needs. You simply choose the stone and its size, and select from our range of finishes and textures to suit the end use – whether it's a modern, more traditional or reclaimed natural stone you're seeking.

ARCHITECTURAL STONE

RHODES ARCHITECTURAL STONE

What really sets us apart is our unique process, blending modern execution and delivery with ancient artisan craftsmanship. And, we deliver a complete stone solution to site. All natural stone pieces are cut to size before shipping, meaning reduced stone wastage, reduced installation time and faster completion of your project.

RobCOMB is the exclusive distributor of ALLCOMB in Australia and New Zealand, supplying quality, reinforced lightweight honeycomb panel solutions and panel cladding systems for internal and external applications.

ROBCOMB

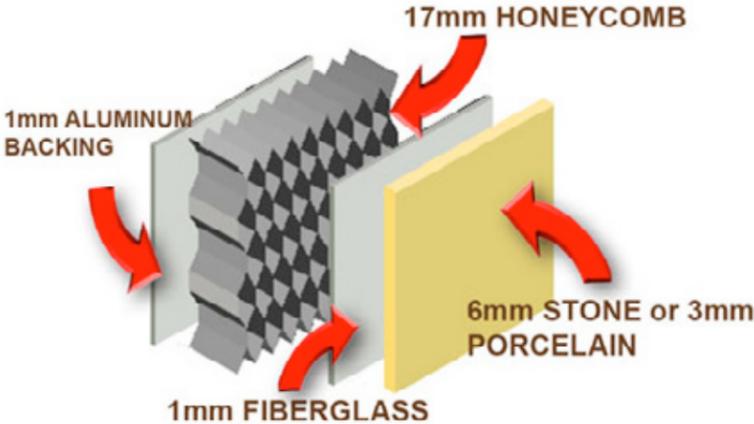

Our honeycomb is manufactured using progressive technologies. It is watertight, non-combustible, stable and incredibly durable. Plus our stone honeycomb weighs a fraction of traditional stone cladding. Best of all, our honeycomb panels come in a variety of finishes: brick, porcelain, marble, granite, sandstone, limestone, onyx and slate.

What's more, the aluminium can be coated in polyvinylidene fluoride (PVDF) resin, a specialty thermoplastic fluoropolymer, which has been used in applications requiring high strength with chemical, stain and fade resistance.

ROBCOMB

STONE HONEYCOMB PANELS

Our lightweight stone honeycomb panels attach a thin piece of natural stone veneer (around 3-6mm thick) to a special aluminium honeycomb backing panel. They are vacuum bonded with industrial grade epoxies, under high temperature and pressure. This provides incredible strength and durability.

BRICK HONEYCOMB PANELS

BrickCOMB™ is our new product, combining the strength and flexibility of honeycomb panels with the look of real brick, for multiple applications.

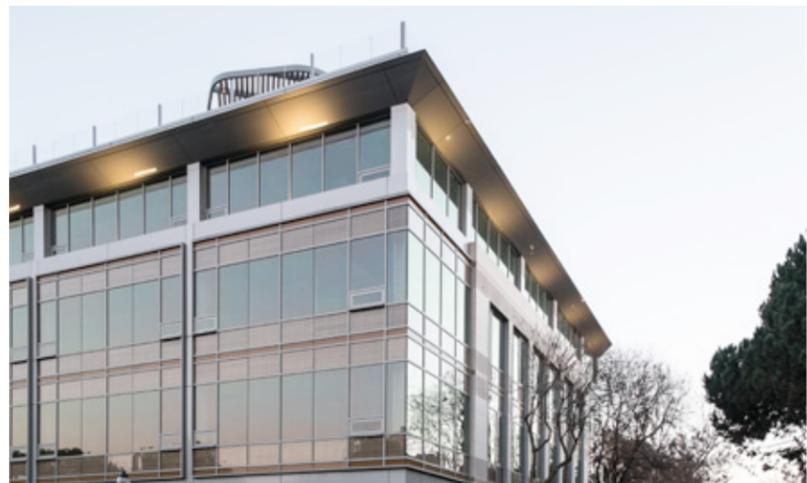

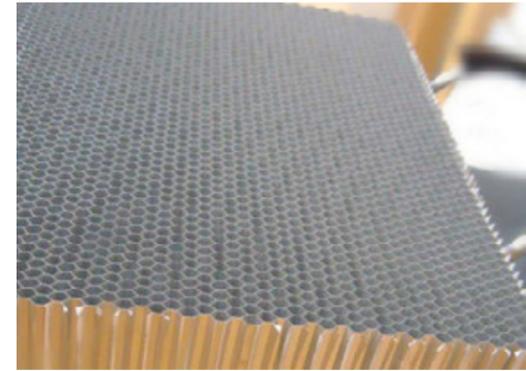

PORCELAIN HONEYCOMB PANELS

Large format ceramic porcelain panels (up to 100 x 300cm) provide a beautiful fade and stain resistant solution, with the underlying strength of an aluminium honeycomb structure.

HONEYCOMB PRODUCTS

RobCOMB offers a range of honeycomb products from energy absorbers and stainless steel honeycomb, to honeycomb ventilation panels and aluminium honeycomb.
