

Application Guide

- 1) It is always recommended to carry out a TEST PATCH evaluation first as there are different types of paints and surface conditions.
- 2) Apply PEEL AWAY paste between 2 mm to 3 mm thick, covering the surface evenly.
- 3) Completely cover the paste with printed PEEL AWAY fibrous laminated paper and smooth out any air bubbles. ONLY use PEEL AWAY paper.
- 4) Tape up the edges with masking tape for optimal results.
- 5) Leave on the surface for 24hrs – 48 hrs (interior) and between 48 hrs to 72hrs (exterior) depending on the number of layers and age of coatings.
- 6) By sliding a scraper behind the paper, ease off the paint, paste and paper in one piece. Remove in small sections and scrape off loose debris and residue. Place in thick plastic tie up bags.
- 7) Thoroughly wash the surface with plain water, nylon brush and sponge.
- 8) Neutralise the surface using PEEL AWAY neutraliser concentrate for PEEL AWAY No 1. Refer detail instructions for thoroughly neutralising of wood and plaster surfaces.
- 9) PEEL AWAY 8 is NON CAUSTIC and pH NEUTRAL.
- 10) For all surfaces including timber, ensure substrates are completely dry PRIOR to repainting. Use a moisture meter to check for dryness of surface. It is recommended to use an all acrylic paint system. Alternatively for damp surfaces we recommend using an epoxy water based undercoat – EPOXYSEAL WB, EPOCOTE F100 or HYDREPOXY 300 followed by finishing paint coats.

Safety Precautions:

Always wear gloves and protective clothing.

Do not scrape old flaking paint, apply PEEL AWAY directly over existing surfaces.

Refer label for safety instructions.

Technical:

Every care is taken in preparation of this information. Recommendation of technical advice, verbal or trials is given with no responsibility or warranty. Every site condition is different and tests are highly recommended.
