- *Shalom Offices Centre, Tel Aviv – Israel*

Geberit Sovent

For multi-storey drainage

The innovative drainage system with the Geberit Sovent fitting offers an economical and high-performance alternative to conventional – parallel vented – stack systems in high rise application.

- Will ensure loading capacities are equivalent to a fully vented modified system with smaller stack size
- It is a fully sealed system that is able to withstand greater positive and negative forces of stack
- Requires less space in vertical stacks
- Less venting
- Complies with AS3500 and is Watermark approved
