100% convenience, zero cables: Push to open Silent for ArciTech

Handleless furniture design fascinates with its purist appeal. This trend often presents challenges for furniture manufacturers: both on the production side and in respect of user convenience.

The convenience of an electromechanical system. Purely by mechanical means.

In terms of self-opening distance in drawers, electromechanical systems have so far produced the most conclusive results. But this makes a power connection imperative, production and assembly complicated.

Hettich has designed a revolutionary innovation: Push to open Silent. Works on an all-mechanical basis so it doesn't need a power supply, and provides the convenience of an electromechanical system. This function was given the iF Design award 2014.

Premium convenience ...

A gentle press on the front panel is all it takes, and Push to open Silent opens the drawer such a long way that there is usually no need to pull it out any further by hand. On closing, the drawer glides in softly and gently. The system's quality and convenience can be felt in every action.

... down to every last detail.

Opening force can be adjusted, in just the same way as drawer release sensitivity. Catering to user preferences and accommodating different drawer weights. The front panel gap can be adjusted with precision as well.

Invisible, straightforward and safe.

The Push to open Silent system is positioned underneath the drawer where it is hidden from view. Adding the system later on is very easy and involves no modifications to existing ArciTech drawer components.

The benefits at a glance:

- Works like electromechanical systems
- Generous opening distance for user convenience
- Opening force and release sensitivity as preferred and for added safety
- Easy to use on all ArciTech drawers and Actro runners
- All-mechanical principle

Push to open Silent for ArciTech

Technical details in brief

- For ArciTech with Actro runner with Silent System up to 60 kg
- Can be added at any time without modifying drawers
- Gap between front panels adjusts from 2 to 4 mm
- Adjustable opening force for optimum performance from different drawer sizes
- Adjustable release sensitivity – convenient and safe
- Good triggering performance on wide drawers without synchronisation bar

Push to open Silent opening system for ArciTech

Set consisting of:

- ▶ Push to open Silent unit, left and right
- ▶ 2 activators
- ▶ with fixing screw

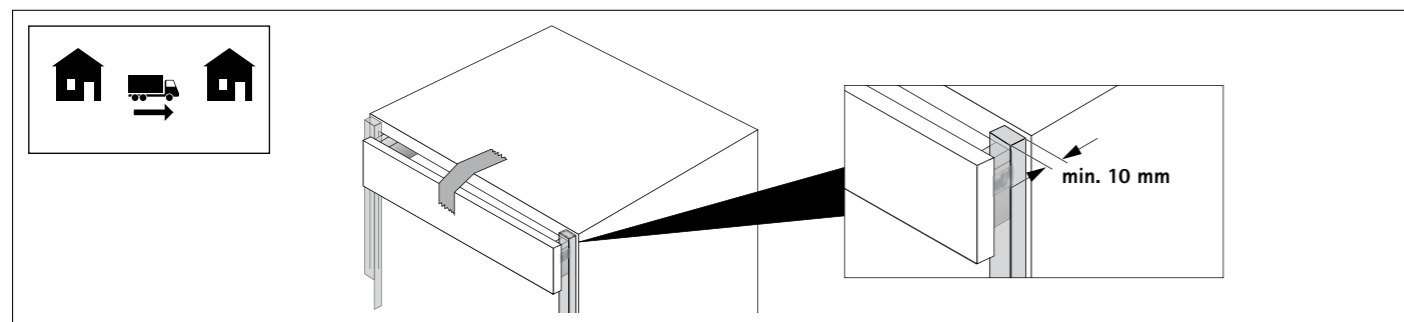

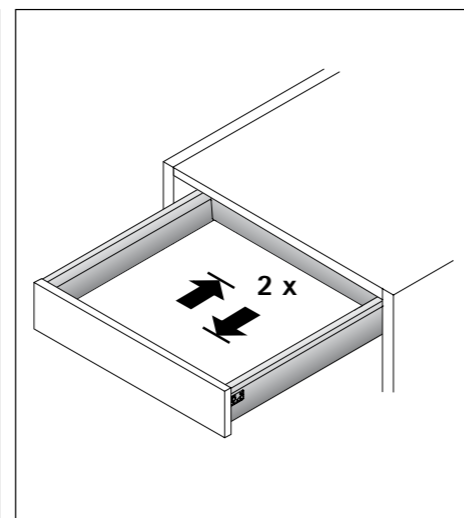

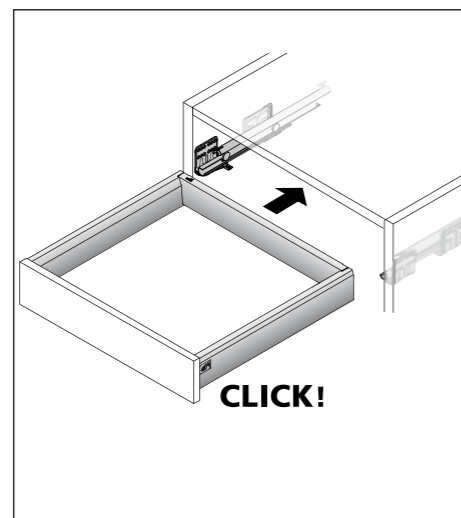

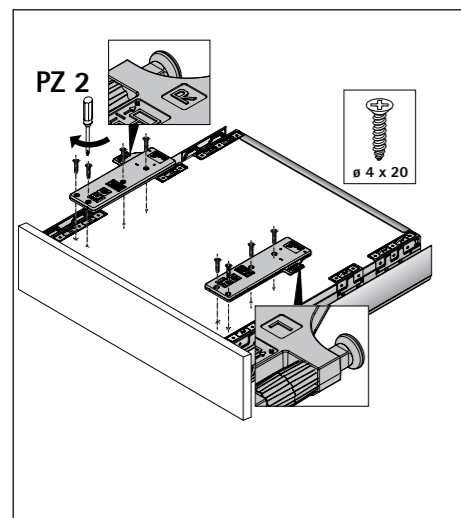

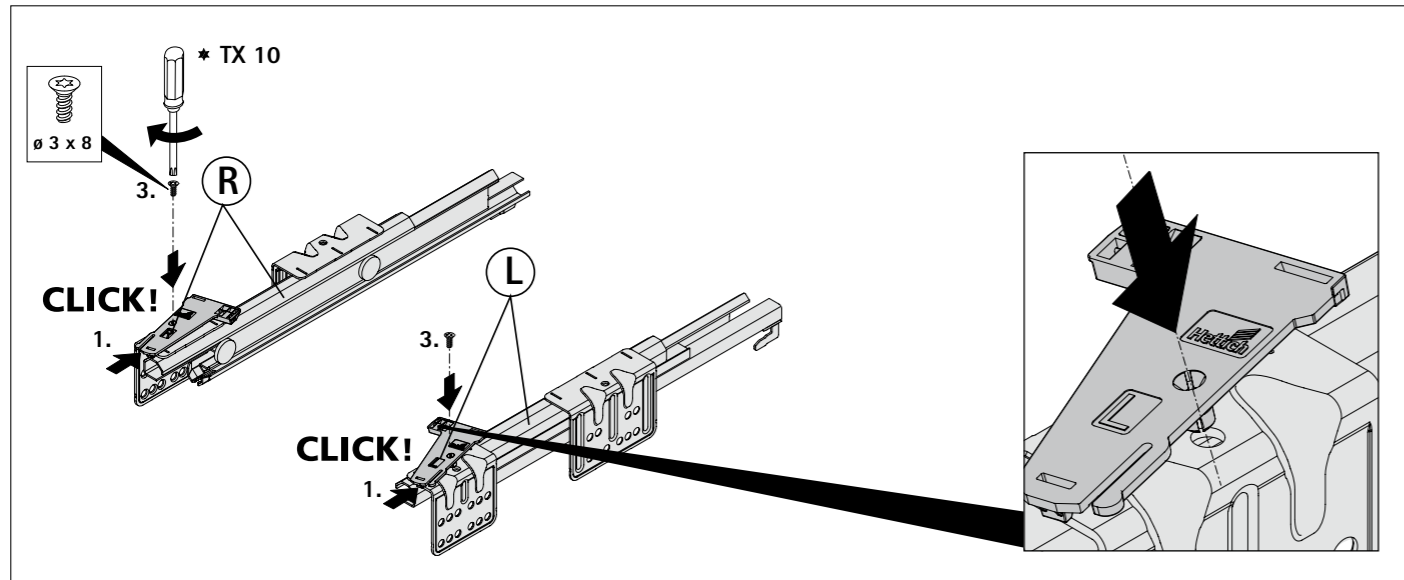

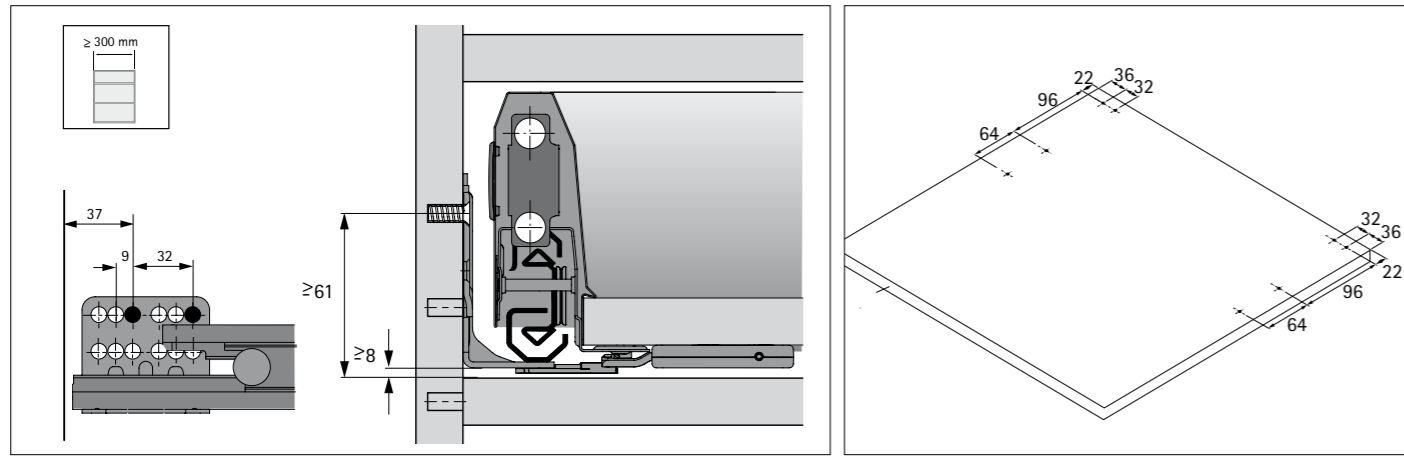

For all Actro runners with Silent System up to 60 kg.
