

Wine cellaring at home:

How to select a wine cabinet

Australia's love for wine

The domestic market accounts for around

500 million litres

of Australian wine per year.

Sales above \$10 per bottle increasing.

Growing import market.

Given Australia's love for wine, it is not uncommon for consumers to have an extensive collection of wine at home. The problem of how to cellar and display wine is one faced by a growing number of wine aficionados who want their own wine on hand to drink whenever they choose.

The golden rules of wine cellaring

Stable temperature

Maintaining a constant cool temperature is critical. Wine can be compromised in conditions that are subject to regular temperature fluctuations.

Humidity above 50%

Bottles should be cellared in an environment where humidity levels are kept between 50% to 60% relative humidity.

Keep it in the dark

Wine should be kept in a dark space, and protected from ultraviolet (UV) light.

No vibrations

Vibration can disturb sediment present in the bottle and cause undesirable chemical reactions.

Constant air flow

A constant airflow is needed to renew the air, limit odours from penetrating the wine and to prevent mould and fungus growth.

Choosing a wine cabinet

A wine cabinet is an ideal cellaring option to meet the needs of the modern wine collector with the leading products including design features that ensure wine is kept in the right conditions for it to age gracefully.

Types of wine cabinet

Single Zone:

Ideal for cellaring all wines. Alternatively, use for serving wines at a single temperature.

Dual Temp:

Separate compartments for serving and/or cellaring at different temperatures.

Multi Temp:

Serve a variety of varietals at their ideal drinking temperatures.

Capacity and size

- How many bottles and varieties of wine do you want to store?
- Provide space to grow your collection.
- Accommodate different size bottles, e.g. champagne.

Shelving and display

- Sliding, reversible and adjustable shelves can provide convenience and flexibility.
- Fitted wooden shelves to minimise vibration.

Location in the home

- Install a wine cabinet in the kitchen or dining area for display, in a separate bar area, under a kitchen bench, or in the garage or basement.

Freestanding or built-in

- Built-in wine cabinets require proper ventilation to avoid overheating.
- Freestanding units are generally less expensive and easy to move around the home.

Style and customisation

- Many wine cabinets are customisable, allowing designers to specify different finishes, colours, racking, door designs and lighting.

A wine cabinet is **NOT** a wine fridge

Wine fridges generate intense cold and remove ambient humidity, which are not ideal conditions for wine ageing. In comparison, wine cabinets deliver a climate-controlled environment that is specifically designed to replicate the conditions found in the best natural underground cellars.

Vintec: Smart solutions for the optimal preservation and enjoyment of wine

- Vintec is an experienced leader and pioneer in premium climate-controlled wine storage in Australia, New Zealand, Singapore and the United States. Recognised and trusted by consumers, professionals and the wine industry, Vintec is a brand that is designed for Wine Lovers by Wine Lovers.
- **New Premium Range**
Made in Europe, with a modern Scandinavian-inspired design, the newest Vintec Premium Range has been designed so that wine lovers can store their entire wine collections and accommodate all main bottle shapes – even Champagne. The proprietary Perfect Cradle™ shelving system features carefully optimised storage space and provides easy access and visibility to all bottles, as well as stunning ways to showcase a collection.
- Ranging from underbench wine cabinets to beautiful walk-in cellars, each Vintec product is engineered to protect wines, optimise storage space and accessibility while maximising capacity, and provide stunning solutions to showcase a wine.
